

Vernet Group supports the underlying objectives of REACH in general and Article 33 in particular.

How can we do this?

By providing you with information on the regulated substances contained in our products so that you are better aware of the risks associated with their use and maintenance.

The REACH Regulation, in force since 2007, aims to limit the use of hazardous chemicals in the European Union.

**REACH** means:

- **R**egistration of all substances manufactured or imported in quantities of more than 1 tonne per year
- **E**valuation of testing proposals, registration dossiers and substances,
- **A**uthorisation, for substances of very high concern,
- **R**estrictions, to manage the risks associated with other **C**hemical substances.

[contact@vernet-group.com](mailto:contact@vernet-group.com)

Our products (thermostatic elements, cartridges, actuators, thermostats and so on) are only marginally affected by REACH.

In the interests of full transparency, we would like to inform you that some of our products contain lead metal (CAS No. 7439-92-1).

The safe uses associated with this substance are:

- Do not ingest
- In the event of operations generating particle emissions, a protective mask must be worn.

Lead is used in accordance with other regulations and standards in force (RoHs, drinking water standards, etc.).
